

Chapter 2 — Licenses

Licensing is the legal scaffolding that makes open source work.

GPL, MIT, BSD, Apache, MPL — each is a different answer to the same question: how do we share source code while preserving the contributor's intent?

The choice of license shapes everything downstream — what corporations can do with the software, how derivatives must be released, and whether patent grants travel with the code.

Chapter 2 — Licenses (cont.)

Licensing is the legal scaffolding that makes open source work.
